- k. Do NOT install this appliance directly over a drain. Steam rising up out of the drain will adversely affect operation, hamper cooling air circulation, and damage electrical and electronic components.

B. Installation of a SteamChef 22CET3.1 or 22CET6.1

DANGER

Improper installation, adjustment, alteration, service or maintenance can cause DEATH, INJURY, AND EQUIPMENT DAMAGE

Read and understand the installation, operation and maintenance instructions before installing, using, or servicing this equipment.

DO NOT INSTALL a SteamChef steamer if it is damaged or if damage is suspected.

Install the SteamChef steamer according to the policies and procedures outlined in this manual.

DANGER

Improper Lifting can cause DEATH, INJURY, and EQUIPMENT DAMAGE

A 22CET3.1 weighs 270 pounds, and a 22CET6.1 weighs 350 lbs.

Use enough workers with experience lifting heavy equipment to place the appliance on the supporting surface.

CAUTION

Attempting to operate an improperly installed or out of level steamer or shifting the steamer while operating can cause injury and equipment damage.

The steamer must be LEVEL both FRONT-TO-BACK and SIDE-TO-SIDE and PROPERLY INSTALLED in all mounting arrangements.

Do NOT shift or move the steamer while it is operating.

Do NOT operate an improperly installed steamer.

1. 22CET's are typically installed with four adjustable legs. See Figures 2-1 and 2-2.
2. The appliance must be level both front-to-back and side-to-side.
3. The operating surface must be level enough to allow leveling the appliance using the adjustable legs of the appliance or the stand.
4. The counter area selected must be capable of supporting an operating weight of:
 - 270 pounds for a SteamChef 3.1.

Figure 3-1
Top View Steamer on Foam Packing Blocks

Figure 3-2
Front View Steamer on Foam Blocks

D. Position and Level the 22CET

1. Move the 22CET to its installed location.
2. Using a level, adjust the legs of the 22CET or the legs of the Cleveland Range stand until the 22CET is level front-to-back and side-to-side.

E. Install the KleanShield™

- a. Never operate a SteamChef Steamer without a properly installed KleanShield™.
- b. To install the KleanShield™:
 - 1) Remove the slide pan racks.
 - 2) Place the KleanShield™ into the steamer with the drain to the back of the cooking compartment and the pipe extension facing down.

**Figure 3-7
Steam Vent
(SteamChef™ 3.1 Shown)**

I. Connect the Free Air Vented Drain Line

 DANGER
DEATH, INJURY, EQUIPMENT and PROPERTY DAMAGE will result from improper installation of drain outlet lines. Install free air vented drain lines as described in this manual.

NOTICE: Furnishing and installing drain lines and drainpipe is the responsibility of the Installer/Owner.

The following restrictions and requirements are critical to the safety of personnel and equipment, and must not be violated under any circumstances:

1. The drain lines must be installed in compliance with the *Food Code* (latest edition) of the Food and Drug Administration (FDA), and any other applicable national, state, or local codes and regulations.
2. The drain line must be free air vented, have gravity flow from the appliance, and terminate outside the perimeter of the appliance.
3. Free air venting requires a minimum 1" clearance between the end of the drain line and the top of the floor drain. See Figure 3-8.
4. Do NOT install the appliance directly over a drain. Steam rising up out of the drain will adversely affect operation, hamper cooling air circulation, and damage electrical and electronic components.
5. Do NOT connect the appliance's drain connection to any drain material that cannot sustain 180° F.
6. Do NOT connect any other drain from any other equipment to the drain line of this appliance.
7. Do NOT connect the drain outlet extension line directly into a floor drain or a sewer line.

8. Do NOT connect this appliance's drain directly to drains or to the plumbing of any other equipment. (Except when using a Cleveland Range Stacking Stand.)
9. Do NOT install a trap or shutoff in the drain line.
10. **Drainpipe Size and Length Guidelines:**
 - **Do NOT make a drainpipe outlet extension more than 12 feet long.**
 - **Do NOT use more than three elbows.**
 - **Up to 6' pipe:** 1 1/2-inch pipe and fittings are acceptable.
 - **Up to 2 elbows:** 1 1/2-inch pipe and fittings are acceptable.
 - **6' to 12' pipe:** 2-inch pipe and fittings are required.
 - **3 elbows on any extension:** 2-inch pipe and fittings are required.
11. Connect the drain to the appliance. See Figure 3-8.
 - a. The steamer is supplied with a 1 1/4-inch pipe connection at the bottom of the drain tee. Do not reduce pipe size.
 - b. Make sure the drain pipe is the correct size. See Item 10.
 - c. While assembling the pipes and fittings of the drain outlet extension, use non-hardening pipe thread sealant.
 - d. Thread fittings together FINGER TIGHT ONLY! DO NOT USE A WRENCH!

J. Water Supply Requirements and Installation

1. Water Supply Requirements

a. Water Quality

Unlike most steam cooking equipment, water quality can vary without major loss of performance of a SteamChef steamer. Even hard water will not affect the operation of a SteamChef Steamer as long as it is cleaned with vinegar daily.

- See the Operator's Manual for cleaning instructions.

b. Water Supply System

- A potable water supply system must be available providing a minimum dynamic pressure of 35 psi and a maximum static pressure of 60 psi.
- If the static pressure is above 60 psi, a pressure regulator must be used and set at approximately 50 psi. Pressure above 60 psi can damage the solenoid valves.

2. Install the Water Supply Lines

Installation Requirements:

- The Garden Hose Thread (GHT) connector used must be NSF rated for food grade service.
 - Do NOT apply pipe thread sealant to NHT or GHT connections.
 - Apply non-hardening pipe thread sealant to all other threaded connections.
 - Install a manual water shut-off valve (Main Water Shutoff Valve) (not provided) between the cold water supply line(s) and the appliance.
 - The National Sanitation Foundation (NSF) requires installation of a check valve (or other approved anti-backflow / anti-siphon device) (not provided) in all supply lines in accordance with and as required by local, state, and national health, sanitation and plumbing codes.
 - Flush the water supply lines before connecting the lines to the appliance.
- #### a. Connect the Water Supply Lines
- The Installer/Owner is responsible for the water connection of this appliance.
 - This appliance is to be installed to comply with all applicable federal, state, or local plumbing codes.
 - **Connect this appliance to COLD WATER** The condenser system and steam generator will not work properly if they are connected to HOT or WARM water.
- #### b. Water supply must have a minimum dynamic (flow) pressure of 35 psi and a maximum static pressure of 60 psi.
- #### c. If the static pressure is above 60 psi, a pressure regulator must be used and set at approximately 50 psi. Pressure above 60 psi can damage solenoid valves. See Figures 3-10 and 3-11.
- #### d. Install a manual water valve between the main cold water supply line(s) and the steamer supply lines.
- #### e. The National Sanitation Foundation (NSF) requires installation of a check-valve (or other approved anti-backflow / anti-siphon device) (not provided) in all supply lines in accordance with and as required by local, state, and national health, sanitation, and plumbing codes.
- Check local codes to determine exactly what type of anti-backflow / anti-siphon device is necessary to meet local requirements.
- #### f. Design the water supply line(s) so the unit can be moved for service.
- #### g. If the supply water meets the requirements shown in the Warranty, then the Single Water Supply Arrangement shown in Figure 3-10 may be used.
- If using the single water supply arrangement: The supply piping to the tee fitting must be at least the next larger size of pipe than the connection provided on the appliance.
- #### h. Although, 22CET's are very tolerant of hard water, the owner may want to use conditioned

water to supply the reservoir. To use a separate conditioned water supply, use the layout shown in Figure 3-11.

- i. The steamer has two 3/4-inch GHT fittings, one for the water reservoir and one for the condenser. See Figures 2-1 and 2-2.

A Filter Washer (dirt filter) is supplied installed in each of the water inlets. See Figure 3-9.

1. Construct all supply lines up to the 3/4-inch NHT fittings.
2. Flush the water supply lines before connecting them to the 3/4-inch fittings.

**Figure 3-9
Filter Washer
(P/N 110987 Shown)**

3. Test Water Supply Lines

- a. Check all connections for proper tightness.
- b. Remove the control side panel to inspect water connections inside the steamer.
- c. Open the water supply valves.
- d. Check all lines and connections for leaks, both inside and outside the steamer.

Figure 3-10 Cleveland Range Single Water Supply Arrangement

**Figure 3-11 Cleveland Range Separate Water Supply Arrangement when Using
Separate Conditioned Feed Water Supply**

* "Conditioned" indicates water that has been filtered or treated by a Cleveland Range approved method to meet or exceed the water quality standards listed in the Warranty

K. Electric Power Supply

- The electric supply must match all electrical and wiring requirements specified on the rating plate.
- NOTE: This appliance is **NOT** Ground Fault Interrupter (GFI or GFCI) compatible.
- The Electrical Diagram is located on the back of the control-side cover.

<h1>⚠ WARNING</h1>
This appliance is not GFI (GFCI) compatible. Do not use a GFI (GFCI) circuit. Using a GFI (GFCI) circuit can result in injury, equipment damage, and property damage.

The connection must be made as follows:

1. Install a main disconnect switch and a separate fuse or breaker for this appliance as shown in Figure 3-12. The fused disconnect switch is called the “Main External Power Switch.”
2. Do not use a GFI (GFCI) circuit. This appliance is not GFI compatible.
3. **Do NOT use a power cord.**
4. Make the electrical connection using flexible conduit, per local code.
5. There should be a sufficient length of flexible conduit between the steamer and the wall so the appliance can be moved for service.
6. Mechanically secure the flexible conduit to the electrical access hole found at the rear of the appliance. See Figure 3-13.
7. Refer to the wiring diagrams and Figure 3-14. Connect the wires to the terminal block and ground connector.
8. The appliance must be electrically grounded by the installer.

CHAPTER 4. OPERATING TESTS

Operating Tests and Final Checkout Procedure

- **This procedure must be performed by a qualified Cleveland Range authorized service representative.**
- Complete the Startup Procedure before starting the actual operating tests.
- Read and understand all steps of this procedure before starting.
- This procedure evaluates the function of the major operating controls of a SteamChef.
- This procedure is for SteamChefs equipped with a Keypad Control Panel, Dial Timer Control Panel, or an ON/OFF Control Panel.
- NOTE: The ON/OFF control works like the manual operation of the Timer model **EXCEPT** that a selector switch is used to turn the cooking function from Standby Heat (OFF) to the Cooking Mode (ON).

A. Startup Procedure

1. Set the ON/OFF Lever to the OFF position and open the steamer door. There should be no water in the steamer.
2. Make sure that the KleanShield™ and reservoir drains are clear (See Figure 4-1).
3. Check for proper installation of the KleanShield™, fan guard, backplate, slide racks (See Figure 4-2), and door gasket assembly.

**Figure 4-1 Inspecting
Compartment drains
(SteamChef 6.1 Shown)**

**Figure 4-2 Inspecting Compartment
Interior Accessories
(SteamChef 3.1 Shown)**

4. Make sure the Main External Power Switch is OFF.
5. Make sure the fuses or breakers are the proper size.
6. Remove the control side access cover.
7. Check the internal wiring and make sure there are no loose or disconnected wires.
8. Make sure the supply wiring is the correct size.
9. Check that the appliance is properly grounded.
10. Correct any deficiencies.

B. Drain Rinse Inspection (continue from Startup Procedure)

1. Turn OFF the ON/OFF lever/switch.
2. Turn ON the water supply to the steamer.
3. Turn ON the Main External Power Switch.
4. The 3-minute drain rinse cycle starts.
5. The drain is flushed with fresh water.
6. Stop the drain rinse cycle before it is complete by setting the ON/OFF lever to the ON position.
7. Drain rinse stops.
8. The operating control circuits energize.
9. The green Power ON and amber SureCook (Timer Models only) indicators on the control panel light.
10. The reservoir begins to fill with water.
11. Restart the drain rinse cycle by setting the ON/OFF lever to the OFF position.
12. During the drain rinse cycle, make the following checks:
 - a. The ON/OFF lever must be turned fully to the OFF position to start the drain rinse cycle.
 - b. Look at the one-inch vent gap between the steamer drainpipe and the floor drain. A steady stream of water drains from the steamer.
 - c. Check for plumbing leaks.
 - d. After about 3 minutes, the cycle is complete.
 - e. Look at the one-inch vent gap between the steamer drainpipe and the floor drain. No more water drains from the steamer.

C. Operating Tests and Final Checkout Procedure (Continue from Drain Rinse Inspection)

1. Set the controls:
 - a. Turn ON the Main External Power Switch.
 - b. Turn OFF the ON/OFF lever. (Timer Models: The green and amber indicators on the control panel are not lit.)
 - c. Set the TIMED/MANUAL switch to TIMED. (ON/OFF models the ON/OFF switch is OFF.)
 - d. Set the timer to zero by turning the dial counterclockwise until it points to the 0 mark.
2. Open the cooking compartment door.
3. Turn ON the ON/OFF lever. The reservoir begins to fill with water.
4. As the reservoir fills with water, check that the green Power ON and amber SureCook indicator lights turn ON.
5. Close the compartment door to close the door interlock circuit.
6. As the water level in the compartment reservoir rises:
 - a. No water flows from the drain opening.
 - b. Check for plumbing leaks in the control compartment.
7. When the water in the reservoir reaches the level of the lower probe, the heating elements and the convection fan turn ON and the steamer heats to the standby temperature.
8. Open the door; the heating elements and convection fan turn OFF.
 - a. The water level in the reservoir continues to rise.
 - b. The water in the reservoir stops rising when water reaches the upper probe.
 - If the water level continues to rise above the tip of the higher probe, turn OFF the ON/OFF lever and see the Operators Troubleshooting Guide.
 - If the problem persists, shut down the appliance and call a qualified Cleveland Range authorized service representative.

9. Close the compartment door.
 - a. The door interlock circuit closes.
 - b. The heating elements and the convection fan turn ON.
 - c. The cooking compartment heats until the standby temperature is reached.
 - d. When the standby heat temperature is reached, the SureCook indicator light, the convection fan, and the heating elements turn OFF.
 - e. Leave the steamer in timed mode for a few minutes.
 - The SureCook indicator light, heating elements and convection fan cycle ON and OFF as the controls maintain the standby temperature in the cooking compartment.
10. Set the TIMED/MANUAL switch to MANUAL, or for ON/OFF Models turn the switch ON.
 - a. The steaming cycle starts.
 - b. Check the following functions:
 - 1) The heating elements and convection fan turn ON.
 - 2) The water heats to steam.
 - 3) After a few minutes, the cooking compartment reaches steaming temperature.
 - 4) The heating elements and convection fan will stay ON as long as the steamer remains in manual mode (or ON for ON/OFF models). The condenser water will cycle to maintain a drain temperature below 140°F.
 - 5) After several minutes of steaming, check for steam leaks around the door gasket.
 - 6) In manual mode (or ON for ON/OFF Models) the steamer continues to operate at the cooking temperature for up to 60 minutes, or until it is set to the timed mode.

NOTE: After 60 minutes of continued operation in the Manual Mode without opening the doors, or switching the steamer to the Timed Mode (or for an ON/OFF model left ON), the cooking compartment temperature automatically lowers to the standby temperature. To return the unit to the cooking temperature, open and close the compartment door.
11. As the appliance continues to steam in Manual Mode, test the no-water/low water safety circuit.
 - a. Close the manual water supply valve(s).
 - b. When the water level drops below the lower water safety cutoff point (the lower probe). The heating elements, the condenser water flow and convection fan will automatically shutoff, and the production of steam will cease.
 - c. Open the manual water supply valve(s).
 - The reservoir refills with water to the safety level and steaming resumes.
12. Set the TIMED/MANUAL switch to TIMED and set the Timer to zero.
 - a. The steam generating cycle stops.
 - b. The heating elements, condenser, and convection fan turn OFF.
 - c. The buzzer sounds for 3 seconds.
 - d. Steam production stops and the compartment returns to standby mode.
13. Open the cooking compartment door and allow the compartment to cool for 3 minutes, then close the door and continue testing.
14. Set the TIMED/MANUAL switch to TIMED.
15. Set the Timer for 10 minutes.
16. As soon as the Timer is set, the steam generating cycle starts. This is the same sequence observed in manual mode, except:
 - a. The Timer controls the cycle.
 - b. The elapsed time to produce steam is shorter because the water in the steam generator and the cooking compartment are already hot.
 - c. The cooking compartment returns to Standby temperature after the Timer counts down to zero.

17. After timed operation starts, check the following:
 - a. The heating elements and convection fan turn on immediately.
 - b. The SureCook indicator light may turn ON depending on compartment temperature.
 - The SureCook indicator remains ON until the compartment reaches the minimum cooking temperature.
 - c. When the SureCook indicator turns OFF, the Timer begins counting down to zero and the condenser cycles as needed.
 - d. As steam is generated, the water level fluctuates and the solenoid makes a clicking sound when it opens and closes the fill valve.
 - e. Check for steam leaks around the door.
 - f. When the timer counts down to zero, the heating elements, the condenser flow and convection fan turn OFF, and the buzzer sounds for 3 seconds.
 - g. After about 30 seconds steam stops being produced.
18. Go to step D, "Shutdown."

D. Shutdown (Continue from Operating Tests and Final Checkout Procedure)

1. Turn the steamer OFF by turning the ON/OFF lever/switch counterclockwise to the OFF position.
 - a. The green Power ON indicator light turns OFF.
 - b. The 3-minute automatic drain rinse cycle starts.
2. When the drain rinse is complete, turn the steamer OFF at the main external power switch.
3. Replace the side panels and secure them with their screws.
4. After completing the Startup, Drain Rinse Inspection, and the Operating Tests and Final Checkout Procedure, the appliance is ready for service.

TROUBLESHOOTING NOTES

1. If the problem is inside the appliance, call a qualified Cleveland Range authorized service representative or Cleveland Range. (Please have the model number and serial number ready when calling.) Cleveland Range will not pay for warranty repairs by unauthorized maintenance and repair centers.
2. Proper installation of the appliance is the responsibility of the Owner-User. Refer to the Warranty.
3. Repairs to external plumbing must be done by a Licensed Plumber.
4. Repairs to external wiring must be done by a Licensed Electrician.
5. If the automatic fill system fails for any reason, the steamer will stop heating when the water level drops below the minimum operating level. The steamer can be operated by manually filling the water reservoir with about a gallon of water approximately every half-hour, until service can be performed.
6. For more information on products and services, contact your nearest Authorized Sales Representative. Call the factory for a preventative maintenance program, descaling information, and water treatment systems.
7. Whenever opening door, especially when water or steam is leaking around the gasket, heed the warning below.

⚠ WARNING
BURN, SCALD AND EQUIPMENT DAMAGE HAZARD
If the drain is blocked, hot water can fill the cooking compartment and spill out when the cooking compartment door is opened. Signs of blocked drains include steam or water leaks around the cooking compartment door, and reduced cooking performance. To help avoid injury: <ul style="list-style-type: none">• Stand on the hinge side and away from the appliance and slowly open the cooking compartment door.• Inspect the drain(s) before each use and clean them if needed. Failure to follow these precautions can cause burns, scalds, and equipment damage.

8. Use the Egg Test to evaluate steamer performance.
 - NOTE: this test is not valid for pressure steamers.
 - 1) Turn on the steamer, and set the selector switch to the manual mode (or for ON/OFF models set the selector to the ON position) so that steam is produced.
 - 2) Preheat the steamer for ten minutes.
 - 3) After the compartment is preheated, place a fresh egg on a perforated steam table pan in the middle of the cavity.
 - 4) Close the door and set the timer as directed by the size chart below

Egg Size	Time
Medium	12 minutes
Large	14 minutes
Extra Large	14 minutes

- 5) Carefully remove the egg and place in a container with cold water running over it.
 - 6) Let cool under cold running water for 5 minutes.
 - 7) After cooling, crack eggshell and peel.
 - 8) A properly operating steamer produces a perfect hard-boiled egg.
9. Although, a SteamChef Steamer normally should not require descaling, the use of extremely "hard" water or failure to follow the cleaning procedures in the Shutdown and Cleaning Instructions in the Operator's Manual may cause scale buildup. Have Cleveland Range authorized technicians or trained onsite maintenance personnel descale the steamer.
